

Subject Code: 1ET4060504	Subject Title: Heat and Mass Transfer
Pre-Requisite	--

COURSE OBJECTIVE

- To provide concept of heat and mass transfer, explain the different mode of heat transfer and their applications
- To provide the importance of various modes of heat and mass transfer to solve various engineering problems
- To explain the significance of heat and mass transfer in design of various industrial equipments

TEACHING AND EVALUATION SCHEME:

Teaching Scheme (Hours per week)				Evaluation Scheme (Marks)			
Lecture	Tutorial	Practical	Credit	Theory		Practical	
				University Assessment	Continuous Assessment	University Assessment	Continuous assessment
2	-	2	3	60	40	20	30

COURSE DETAILS

Unit	Topics and Sub-topics	Lecture Hours
Unit-1	Heat Transfer Conduction: Steady-state and transient flow through various geometries, Convection: LMTD and NTU, overall heat transfer coefficient. Application of dimensional analysis to convection. Heat transfer rate and Heat transfer coefficient calculations. Double pipe parallel and counter-flow heat exchangers, natural and forced convection through tubes and outside tubes, Shell and tube heat exchanger, and finned tube heat exchanger. Boiling of liquids and condensation of vapours.	7
Unit-2	Radiation Radiation from black and real surfaces, radiation transfer between black and grey surfaces, view factor, radiation shield, and multi-sided enclosures., Thermal insulation, Economic and critical thickness of lagging.	7
Unit-3	Mass Transfer Diffusion in gases: Fick's law, determination and estimation of diffusion coefficient; diffusion through stagnant gas and equimolecular counter-diffusion. Diffusion in liquids: Mass transfer across phase boundaries, two-film theory and mass transfer coefficient	2
Unit-4	Gas Absorption, adsorption, Extraction and Distillation (flash and differential): Basic principles, laws, and calculations. Equilibrium,	8

	co-current and counter-current operations. Ideal stage concept and calculation of number of ideal stages. Efficiency. Packed bed and tray Column	
--	--	--

Practical's /Experiments

1. Determination of thermal conductivity of solids
2. Studies in heat transfer by natural convection
3. To compare overall heat transfer coefficients for parallel flow and counter flow in double pipe heat exchanger
4. To study the performance of 1-2 fixed tube sheet heat exchanger and calculate overall heat transfer coefficient
5. Determination of Heat transfer coefficient in laminar flow
6. Heat transfer in turbulent flow
7. Radiation heat transfer
8. Heat transfer studies in plate heat exchanger

COURSE OUTCOMES

On completion of the course, student will be able to

- CO1 - Ability to understand conduction and convection heat transfer equations to various geometry and solve complex engineering problems
 CO2 - Ability to investigate the phenomena of boiling and condensation and analyse the thermal coefficient of various heat exchanger configurations
 CO3 - Ability to understand and analyse the radiation heat transfer.
 CO4 - Ability to understand the diffusional mass transfer.
 CO5 - Ability to understand and design the various mass transfer operations.
