

Sankalchand Patel University
Faculty of Engineering and Technology
First Year Master of Technology in Civil Engineering
(Computer Aided Structural Analysis and Design)
In Effect from Academic Year 2023-24

Branch Name:	Civil Engineering (Computer Aided Structural Analysis & Design)
Semester/Year:	Semester I / First Year
Subject Title:	Advanced Foundation Engineering
Subject Code:	2ET2060104T
Pre-requisite:	Soil Mechanics, Geo-Technical Engineering 1 & 2

Credit	Teaching Scheme Hours per week				Evaluation Scheme (Marks)								Total (Marks)
					Theory (Marks)				Practical (Marks)				
	L	T	P	Total	SEE		CCA		SEE		CCA		
					Min.	Max.	Min.	Max.	Min.	Max.	Min.	Max.	
3	3	0	0	3	24	60	16	40	00	00	00	00	100

Course Objective:

1. Foundation is an important component of any civil engineering structure.
2. The structural loads of buildings, bridges, towers, and other civil engineering works must be transmitted to the underlying natural soil or rock material using a foundation system that is safe, stable, and economical.
3. The course on Advanced Foundation Engineering provides the students necessary geotechnical engineering skills to analyze and design shallow and deep foundation systems under different loading and soil conditions.

Subject Contents			
Sr. No	Topic	Total Hours	Weightage (%)
1	General requirements, bearing capacity computations, settlement computations, use of field tests like SPT as per relevant IS code.	05	10
2	Shallow foundations: different types, proportioning of footings for equal contact pressures, eccentrically loaded footings, soil design of combined footings, strap footing, C.P under rigid and Flexible footing	04	10
3	Rafts: different types, bearing capacity and settlement computations of raft on different soil deposits, determination of contact pressure under raft; concept of floating foundation buoyancy raft, Modulus of sub grade reaction	05	10
4	Pile foundation: vertical and lateral load capacity of a pile, settlement analysis of pile group, under reamed piles, IS code provisions, pile load test, Piled raft foundation and analysis	10	25
5	Well foundations: different types, stability analysis and basic concepts	02	05
6	Dynamic analysis of foundations: dynamic soil properties, natural frequency of machine foundation-soil system, different types of machine foundations, static and dynamic criteria for soil-foundation system, design of block foundations per IS code	10	25
7	Foundations on expansive soils, waffle slab/raft, concept of CNS layer, chemical stabilization etc.	02	05
8	Liquefaction: Types, Factors and mitigation methods	02	05
9	Introduction to soil-structural interaction	02	05

List of Experiments/Tutorials:

At least 15 problems based on above topics.

Course Outcome:

After learning the course, the students should be able to:

1. Select appropriate foundation system for different structures,

First Year Master of Technology in Civil Engineering
(Computer Aided Structural Analysis and Design)
In Effect from Academic Year 2023-24

2. Design shallow foundations that satisfy the allowable bearing capacity and settlement requirements based on soil properties
3. Design deep foundation satisfying bearing capacity and settlement requirements,
4. Design of machine foundation under static and dynamic loads,
5. Evaluate the liquefaction potential of soil deposits

Open Ended Problems:

Apart from above tutorials/experiments a group of students has to undertake one open ended problem/design problem. Few examples of the same are given below:

1. Development of spread sheets/computer programmes for the design of shallow, raft, pile and well foundation.
2. Design of machine foundation for a problem preferably selected from industry.
3. Design of foundation of real-life structure using open-source/commercial software.

Course Learning Outcomes (CLO): On completion of this course, the students will be able to:

CLO	Description	Bloom's Taxonomy Level
CLO1	Select appropriate foundation system for different structures,	L-1 and L-2
CLO2	Design shallow foundations that satisfy the allowable bearing capacity and settlement requirements based on soil properties	L-3 L-4 and L-5
CLO3	Design deep foundation satisfying bearing capacity and settlement requirements,	L-5
CL04	Design of machine foundation under static and dynamic loads	L-4 and L-5
CL05	Evaluate the liquefaction potential of soil deposits.	L-4 L-5 and L6

L1- Remember, L2- Understand, L3- Apply, L4- Analyze, L5- Evaluate, L6- Create
